

2023

Direct costs for the Manufacturing industry:

Total for non-fatal workers compensation claims with more than five days away from work.

Workplace Safety Index: Manufacturing

Annual report from Risk Control Services

The U.S. Manufacturing industry loses nearly \$8.32 billion a year to serious, nonfatal workplace injuries.

The top five causes

	Cost in billions	Percent total	
1.	\$1.80	21.6%	Overexertion involving outside sources (handling object)
2.	\$1.20	14.4%	Falls on same level
3.	\$0.97	11.7%	Struck by object or equipment (being hit by objects)
4.	\$0.82	9.9%	Caught in or compressed by equipment or objects (running equipment or machines)
5.	\$0.71	8.5%	Falls to lower level

Are these injuries just the cost of doing business?

Risk is often a part of doing business, but understanding the risk and having controls in place can help protect your workers and your bottom line. Have you done all you can to help mitigate the risk of these injuries?

Ask yourself

- Do we restrict access underneath work areas?
- Have we installed appropriate guards?
- Do we use appropriate non-slip floor surfaces?

The experienced specialists of Risk Control Services understand the complexity of the Manufacturing industry – and the risks involved.

Liberty Mutual policyholders have exclusive access to risk control tools and resources through Liberty Mutual SafetyNet™ – visit lmi.co/safetynet to chat live with the Risk Control Consulting Center, or email them anytime at RCConsultingCenter@LibertyMutual.com

Scientific methodology: The Liberty Mutual Workplace Safety Index is based on information from Liberty Mutual, customized data from the U.S. Bureau of Labor Statistics (BLS) Office of Safety, Health, and Working Conditions, and the National Academy of Social Insurance (NASI). BLS non-fatal injury data are analyzed with the Liberty Mutual data to determine which events caused employees to miss more than five days of work, and then to rank those events by workers compensation costs, which are then scaled to the NASI total cost. To capture accurate injury cost data, each index is based on data three years prior. Accordingly, the 2023 index reflects 2020 data.

The illustrations, instructions, and principles contained in the material are general in scope and, to the best of our knowledge, current at the time of publication.
